

Wide and long rubber

This product combines the technology of Okayasu Rubber's long-length rubber sponge sheet "TOUGHLONG Series" and Ukawa Rubber's high-resilience rubber sponge extruded product "Super Set Form® (SSF)".

In addition to the cushioning, weather resistance, and sealing properties this product resolves loss of elasticity by adding high resilience property. This product comes in a wide and long rubber sponge sheet, featuring the unique softness characteristic of open-cell foam.

Lasting strength

While rubber sponge is soft and offers high conformability, loss of resilience has been a challenge.

Our Super Set Form® that does not lose its resilience has a low compression set property nearly 0% in addition to softness, conformability, and resistance to water, chemicals, and weather.
